

SELECTIVE CDK4/6 INHIBITOR

Sustained PFS Benefit with Once-Daily Brexiva in HR+/HER2– mBC

Subject: Sustained PFS Benefit with Once-Daily Brexiva in HR+/HER2– mBC

From: Brexiva Oncology Medical Affairs

Dear Dr. [Lastname],

For your patients living with HR+/HER2– metastatic breast cancer, balancing efficacy with quality of life is a constant consideration. Brexiva® offers a once-daily oral option that changes the treatment landscape.

In the BLYVOR-3 trial, patients receiving Brexiva plus endocrine therapy achieved a median progression-free survival of 26.4 months — double that of endocrine therapy alone. 58% of patients achieved a confirmed objective response.

26.4 mo

MEDIAN PFS

58%

OBJECTIVE RESPONSE

42%

RISK REDUCTION

What this means for your practice:

- **Once-daily oral dosing** — simplified regimen for your patients
- **42% reduction** in risk of disease progression or death
- **Proven efficacy** across first-line and prior-treated populations
- **Manageable safety profile** with established monitoring protocols
