

Living with HR+/HER2– Metastatic Breast Cancer — Your Guide to Brexiva

A simple guide to understanding your treatment and what to expect

Supporting you through your treatment journey

What is Brexiva?

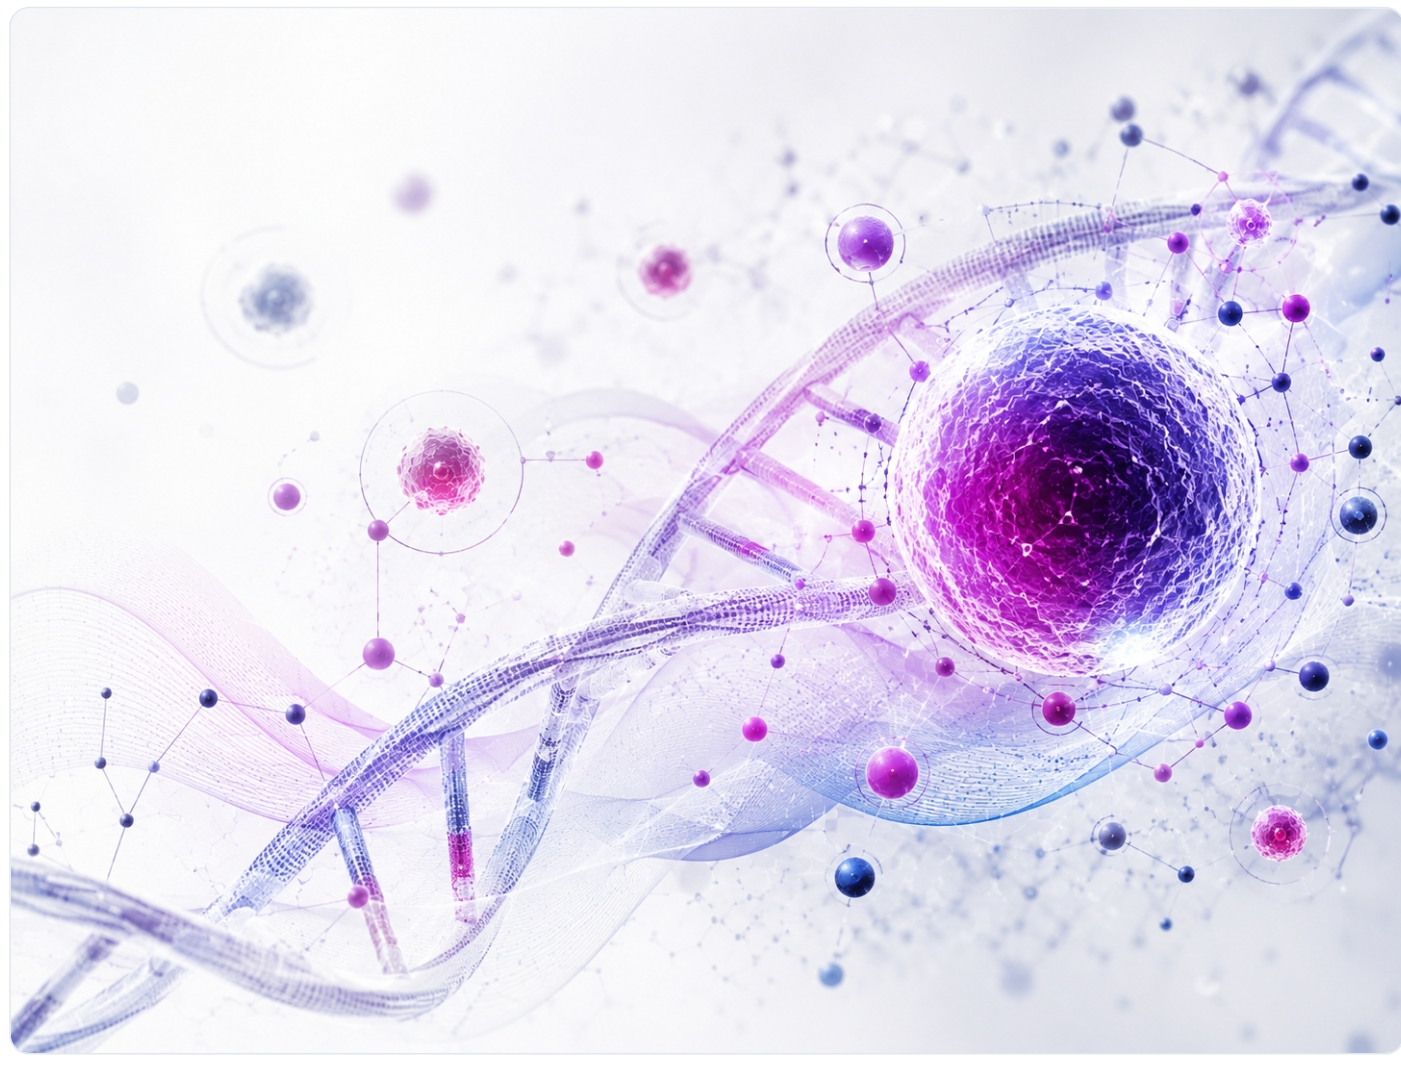

Brexiva is a medicine that helps slow or stop the growth of breast cancer cells. It works by blocking proteins called CDK4 and CDK6 that cancer cells need to divide and grow.

How is it taken?

Brexiva is taken as one tablet by mouth once a day, together with your hormone therapy. This means a simple daily routine — no infusions or injections needed.

✓ Your Simple Daily Routine

- 1 Take one Brexiva tablet at the same time each day
- 2 Take it together with your hormone therapy
- 3 No infusions or injections — just one daily tablet

Brexiva targets specific proteins that cancer cells need to grow

What can I expect?

In clinical studies, patients taking Brexiva with hormone therapy went significantly longer without their cancer growing compared to hormone therapy alone. Many patients also saw their tumors shrink during treatment.

Proven Results

Patients on Brexiva + hormone therapy experienced more than double the time without cancer progression compared to hormone therapy alone.

How Brexiva works to slow cancer cell growth

Important things to know

- Tell your doctor if you develop signs of infection (fever, chills) — Brexiva can lower your white blood cell count
- Regular blood tests will be needed to check your blood counts and liver function
- Take Brexiva at approximately the same time each day

When to Contact Your Doctor

If you experience fever, unusual bruising or bleeding, persistent fatigue, or yellowing of your skin or eyes, contact your healthcare provider right away. These may be signs that need prompt medical attention.

Global HCP Patient Advocacy Communication

Brenova | HR+/HER2– Metastatic Breast Cancer

Supporting Advocacy-Led Conversations in Metastatic Breast Cancer

Brexiva helps frame specialist communication around clarity, education, and patient-centered oncology engagement.

Patient-Centered Context

Focused on the communication needs surrounding HR+/HER2– metastatic breast cancer.

Specialist Alignment

Supports oncologists and breast cancer specialists with clear, structured educational messaging.

Advocacy Support

Designed to strengthen awareness, dialogue, and professional engagement across global settings.

 Clarity in communication

 Specialist-focused education

 Advocacy-led engagement

For Oncologists and Breast Cancer Specialists

Scientific educational content intended for healthcare professional audiences only.

Your care team is here to support you every step of the way

Questions?

Talk to your healthcare provider or call the Brexiva Patient Support Line. We're here to help you understand your treatment and feel supported throughout your journey.

Brexiva Patient Support Line

Call us anytime with questions about your medication, side effects, or treatment plan. Our trained support specialists are available Monday–Friday, 8 AM–8 PM ET.
